

FOR IMMEDIATE RELEASE

BESSEY Telescopic Support Rod (STE)

The STE Series of telescopic support rods are designed to help hold building materials in place, while freeing up the installer's hands for installation of drywall, wood paneling, trim pieces or virtually anything within the capacity rating of the support !

BESSEY's new STE Series is available in three support ranges:

- STE98: 58" – 98"
- STE118: 67" – 118"
- STE145: 82 - 145".

The STE Series is one of the most powerful support rods on the market with a load capacity of up to 350 lbs. at the maximum vertical extension and 770 lbs. when the telescopic support is fully retracted. The STE Series can be used in spaces as low as 58", and as high as 145".

One of things that make the STE Series so unique is the combination of several features. The support can be adjusted to the exact requirements in a few simple steps. The pump mechanism and quick-release button are built into an ergonomically shaped handle. Simply pump the handle to the final desired height, then twist the same handle clockwise to apply the precise pressure required. The STE Series boasts a swivelling non-slip PVC pad with a range up to 45° on a clean dry surface. Use the pads convenient anchor points when in doubt.

BESSEY. Simply better.
