

FOR IMMEDIATE RELEASE

BESSEY GearKlamp (GK Series)

With the new GearKlamp, BESSEY moved the handle to make clamping easier. The rail-mounted handle is now offset from the point of contact and allows a wider variety of assembly applications in comparison to more traditional clamps. The GearKlamp reduces or eliminates the need for awkward glue-up workarounds.

The BESSEY GearKlamp offers a more compact solution than the classic bar clamp. Broad movements of the clamping arm are done with a quick-adjust button that allows one to get to the right clamping position quickly and productively. The final clamping action is completed by turning the handle, which is uniquely positioned around the rail. Each turn of the handle transfers the clamping force to the spindle via a geared mechanism incorporated into the sliding bar. This innovative design offers a surprisingly comfortable clamping position and permits applications in places where traditional clamps would not be practical.

BESSEY. Simply better

The award winning GearKlamp:
